

CALCULATION · UTILITY

Weekly Report PDF

Auto-generates the weekly work report as a PDF.

Key Purpose

Why this program

1. One combined weekly report in a single click

- Scans a folder for every PDF and merges them into one file named after the folder

→ **Effect:** The whole team's weekly reports become one document instantly — no manual copy-paste or print-and-staple

2. Automatic, consistent ordering

- Files are sorted by a fixed team priority list, with special sub-ordering for one member's multi-part files

→ **Effect:** The merged report always follows the same page order, so reviewers never hunt for a section

3. Safe, validated merging

- Each PDF is opened and validated first; unreadable files are skipped, overwrite is confirmed

→ **Effect:** A corrupt file can't break the run, and an existing report is never lost by accident

4. Non-blocking with live feedback

- Merging runs on a background thread with a progress bar and per-file status

Required inputs : A folder containing the weekly PDF reports to combine

Main Window – Item Guide

1. Select Directory (folder of PDFs)
2. Selected directory path label
3. PDF File List (found files & merge order)
4. Start PDF Merge
5. Status message (idle / processing / done)
6. Progress bar
7. Merge priority order reference

Overview

What it does

1. Auto-generates the weekly work report as a PDF

Category: Calculation · Utility

Folder: WeekWorkPDF

Main scripts: week.py

Scripts / Status: 1 scripts · In Development

Tags: PDF · 주간보고 · report

Notes & Information

- Part of the in-house Plant Engineering automation suite — category: Calculation · Utility.
- Runs offline as a pure-Python / Tkinter tool; portable across PCs via OneDrive sync (needs Python + packages).
- Launch from the PC launcher (런처.bat) or run the main script: week.py.
- Current status: In Development — behavior/outputs may still change.
- Output samples and the program window above reflect the current build.
